

LawMate RD-30 Camera Detector & Scanner

FEATURES

- Find wired hidden camera even when its power is off
- Can be used as wireless audio bugs sweeper
- 4 sections of light scale to show relative RF signal strength
- Extremely small pocket-sized and light-weighted model
- Vibration detection mode for complete discreet operation
- 20MHz to 6GHz wide scanning range
- Find hidden automobile GPS tracking devices
- Detect both wireless and wired signals

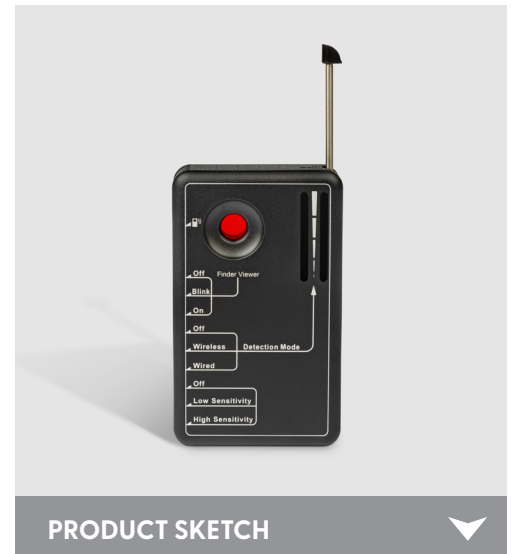

INTRODUCTION

This extremely small model is used heavily to all levels of law enforcement, private investigators and for personal use for people that demand to have privacy in their lives! RD-30 detects wired and wireless audio and video devices with frequencies between 20MHz - 6GHz.

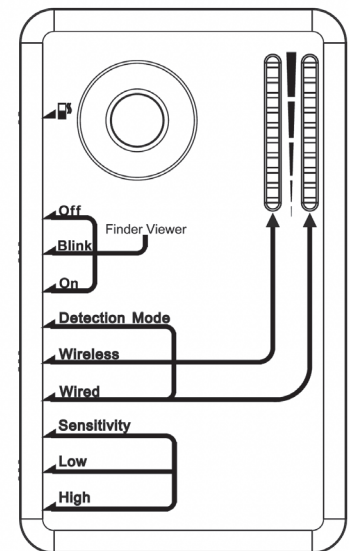

On the back side of this detector, you will find red LED lights that flash intermittently. Looking through the eyepiece, you can see anything that reflects light back to you. If there is a hidden wired or wireless spy camera, even the size of a tiny pinhole, it will reflect light back to you and you can easily locate the hidden camera source even if the camera is powered off!

SPECIFICATION

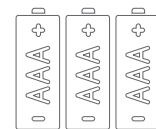

ITEM NUMBER	RD-30
BATTERY TYPE	AAA Battery
FREQUENCY RANGE	20MHz - 6GHz
DIMENSION	75x 80x52x15.5mm 44x17mm
WEIGHT	74g (without battery)
